EMAIL FORENSIC INTELLIGENCE REPORT

EXECUTIVE SUMMARY

CRITICAL THREAT DETECTED. The analyzed email contains multiple indicators associated with phishing, business email compromise, impersonation, suspicious URLs and failed email authentication.

1. CASE INFORMATION

Case ID	EM-20260823152952
File Name	bec.eml
Analysis Timestamp	2026-08-23T09:59:52.466525

2. RISK ASSESSMENT

Risk Score	90 / 100
Classification	CRITICAL
Threat Types	IMPERSONATION, SOCIAL_ENGINEERING

3. EMAIL INFORMATION

From	ceo@microsoft-corporate.com
From Email	ceo@microsoft-corporate.com
To	finance@example.com
Reply-To	executive.transfer@gmail.com
Reply-To Email	executive.transfer@gmail.com
Return-Path	<executive.transfer@gmail.com>
Subject	Urgent Confidential Payment Request
Message-ID	<bec-987654@example.com>

4. EMAIL AUTHENTICATION

Mechanism	Result
SPF	FAIL
DKIM	FAIL

DMARC	FAIL
-------	------

5. NETWORK AND ORIGIN ANALYSIS

Extracted IPs	45.155.22.91
IP Address	45.155.22.91
Country	Pending API
Region	Pending API
City	Pending API
ISP	Pending API
Organization	Pending API
Latitude	Pending API
Longitude	Pending API
Lookup Status	PENDING_API

Received Header Chain

Hop 1: from unknown-mail.example.net (45.155.22.91) by mail.example.com; Sat, 22 Aug 2026 16:00:00 +0530

6. URL ANALYSIS

No URLs detected.

7. THREAT INDICATORS

- SPF authentication failure detected
- DKIM authentication failure detected
- DMARC authentication failure detected
- Sender and Reply-To addresses do not match
- Urgency-based social engineering indicators detected
- 1 IP address(es) extracted from email headers

8. RISK FACTOR BREAKDOWN

Indicator	Points
SPF authentication failed	25
DKIM authentication failed	20
DMARC authentication failed	25
Reply-To address differs from sender address	15

Indicator	Points
Urgent/social-engineering language detected	5

9. FORENSIC ASSESSMENT

The analyzed email exhibits multiple high-risk indicators consistent with phishing, impersonation or business email compromise. Immediate security review and containment is recommended.

Important: Geolocation results identify the approximate location of observed network infrastructure. They do not establish the physical location or identity of the human attacker.

10. DIGITAL EVIDENCE

SHA-256	71014464280e94beeb4016a3dc78dfb746d93b23347098b107cfd9d3d791cbaa
Integrity Status	VERIFIED
Evidence Timestamp	2026-08-23T09:59:52.466482

11. RECOMMENDED ACTION

- Do not click links contained in the email.
- Do not reply to the sender.
- Quarantine the email.
- Block or investigate suspicious sender domains.
- Investigate the originating IP and infrastructure.
- Verify the request through an independent trusted channel.

DISCLAIMER

This report is automatically generated by EmailGuard AI for cybersecurity analysis and investigative support. The findings represent technical indicators and confidence-based assessments. They should not be treated as definitive identification of an individual attacker. Human analyst review is recommended before legal, administrative or enforcement action.
